Samsung brings new heating and cooling solution to Chichester Barbers

Samsung's Wind-Free™ technology enhances indoor comfort by using thousands of micro-holes to disperse air uniformly, without unpleasant blasts of cold wind.

London, UK – 14th September 2020 – Modern and traditional barbers shop, Chichester Barbers, has been refurbished with a brand new heating and cooling system from Samsung.

Southdowns AC, an Air Conditioning supplier, designed and installed the cooling solution **“I would most definitely use Samsung's range of units for other projects, purely due to the easy installation and built in WiFi.”**

within the barbers. The brief received for the project outlined that the user required a system that would cause the least amount of disruption in the short window before the reopening of the shop post COVID-19. The Wind-Free™ cassette was chosen by the installer as it provided a multitude of benefits, including automatic control of the temperature and fan speed to keep the room mild and comfortable.

Samsung's Wind-Free™ technology enhances indoor comfort by using thousands of micro-holes to disperse fresh air uniformly without any unpleasant blasts of cold wind. In Wind-Free™ mode, air is spread softly and silently, creating a 'Still Air' environment that allows people to live, work and relax comfortably without experiencing unpleasant cold drafts.

Following the official introduction of the new Wind-Free™ wall-mounted air conditioner platform in January this year, Samsung has extended the range to welcome the Wind-Free™ Deluxe, a wall-mounted air conditioner for its VRF (DVM) and Eco Heating System (EHS) heat pumps.

Julian Edwards, Director at Southdowns AC said: “I have used Samsung products in quite a few projects for the past 12 years. The Wind-Free™ wall mounted unit was an obvious choice for this project as the spec met the brief and for me, it's been a real winner this year, particularly with bedrooms. There were no issues at all whilst installing this product and the unit was installed within a day. I would most definitely use Samsung's range of units for other projects, purely due to the easy installation and built in WiFi.”

Steve Fleming, Head of Air Conditioning at Samsung said: “At Samsung, we pride ourselves on innovation and a wide range of products to fit any brief. It's great to see our Wind-Free™ range used in a variety of projects and we've consistently had positive feedback which is fantastic.”
